EAAP-Annual Meeting, 2016, Belfast, UK:
Genetic and environmental factors to understand
dysbiosis in the GI tract of pigs (with PiGutNet)

DIARRHEA IN PIGS

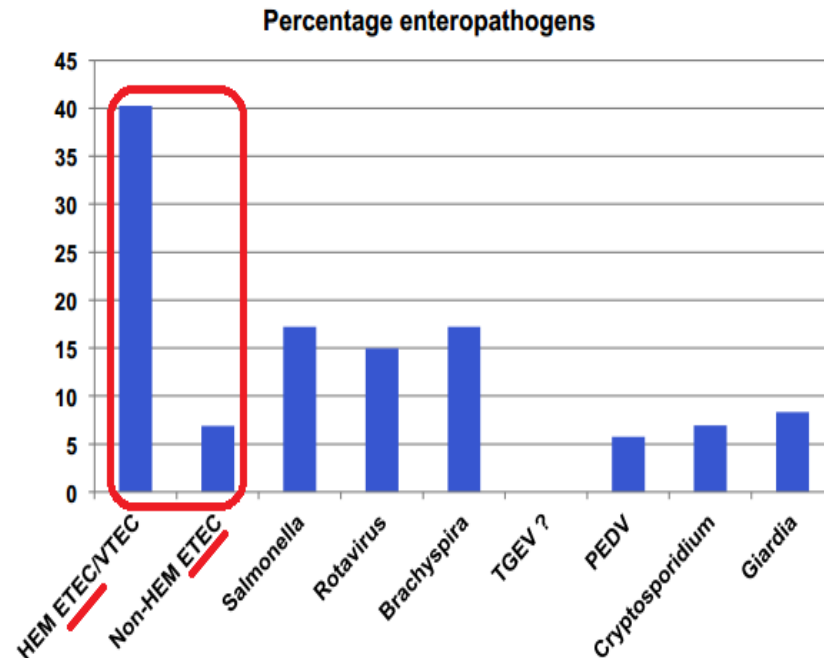

› Most outbreaks occur during the first 2 wk post weaning

- Morbidity may be over 50%
- Losses of piglets can be 17%
- Growth reduction (100-400 g/d)

› Enterotoxigenic *E. coli* (ETEC) is an important etiological agent

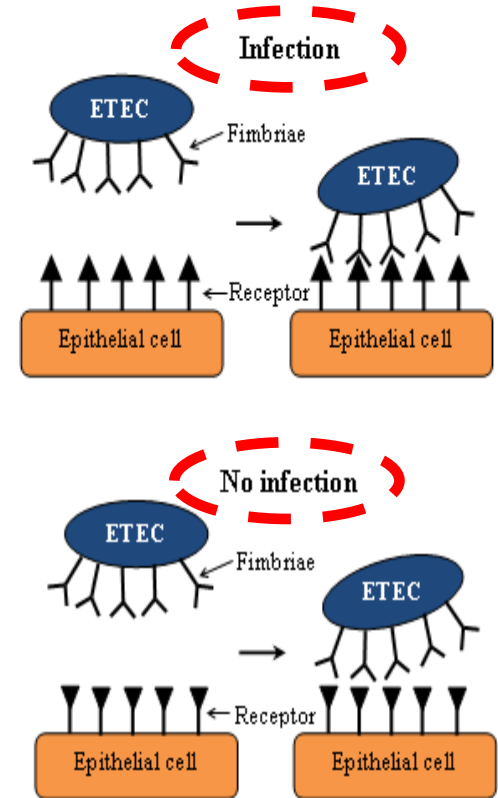

- ~10 million piglets die annually worldwide due to diarrhea, 50% is caused by ETEC

Bacteria and viruses identified in faeces of pigs post weaning on Belgian farms

Adopted from Cox (2013)

PATHOGENESIS OF PWD

- Villous cells: inhibit the non-glucose-dependent pathway for Na⁺, therefore also Cl⁻ and water absorption
- Crypt cells: stimulate Na⁺ along with Cl⁻ and water secretion

FUT-1 GENE IN PIGS

- › A single guanine-to adenine mutation at nucleotide 307 in \pm -(1,2)-fucosyltransferase (FUT-1) gene is determinant for the susceptibility of piglets to E. coli F-18 diarrhoea.
- › What is the influence of the host genetics on the development of the gut microbiota, and the host responses (immune system and metabolome) under non-challenged conditions?

OBJECTIVE

To study the influence of FUT1 gene variants on:

- › Establishment and succession of the gut microbiota
- › The intestinal binding of *E. coli* F18 and mucosal immune responses of piglets post weaning
- › Expression of inflammatory genes and tight junctions in the gut mucosa
- › Host metabolism and weight

ANIMAL MODEL

EXPERIMENTAL SETUP

Ex vivo (PIOC): Adhesion of *E. coli* O138:F18 to gut epithelium

PIGLET WEIGHT

| Day | SENSITIVE (SEN) | RESISTANT (RES) |
|-----|------------------|------------------|
| 0 | 1.3 | 1.7 |
| 7 | 2.9 | 2.4 |
| 14 | 4.0 | 3.8 |
| 21 | 5.9 | 5.2 |
| 28 | 8.1 ^a | 6.8 ^b |
| 34 | 7.8 ^a | 6.7 ^b |

^{a,b}Values are significantly different ($p < 0.05$)

MICROBIAL GROUPS IN FAECES

| Day | Hemolytic bacteria Log CFU/ g sample | | Clos. Perfringens Log CFU/ g sample | | Lactic acid bacteria Log CFU/ g sample | |
|-----|---|------|--|------|---|-----|
| | SEN | RES | SEN | RES | SEN | RES |
| 5 | <6.2 | 6.3 | 7.7 | 7.5 | 9.7 | 9.4 |
| 7 | <6.2 | 6.3 | <8.0 | 7.8 | 9.6 | 9.4 |
| 14 | <6.3 | 6.3 | 7.5 | <7.4 | 8.9 | 8.7 |
| 21 | <6.3 | 6.2 | <6.6 | 6.5 | 9.1 | 8.8 |
| 28 | <6.3 | 6.3 | 5.2 | <5.0 | 9.0 | 8.7 |
| 34 | 8.7 | <7.5 | <3.0 | <2.8 | 8.8 | 8.6 |

No influence of genotype or age on
entero- or anaerobic bacteria

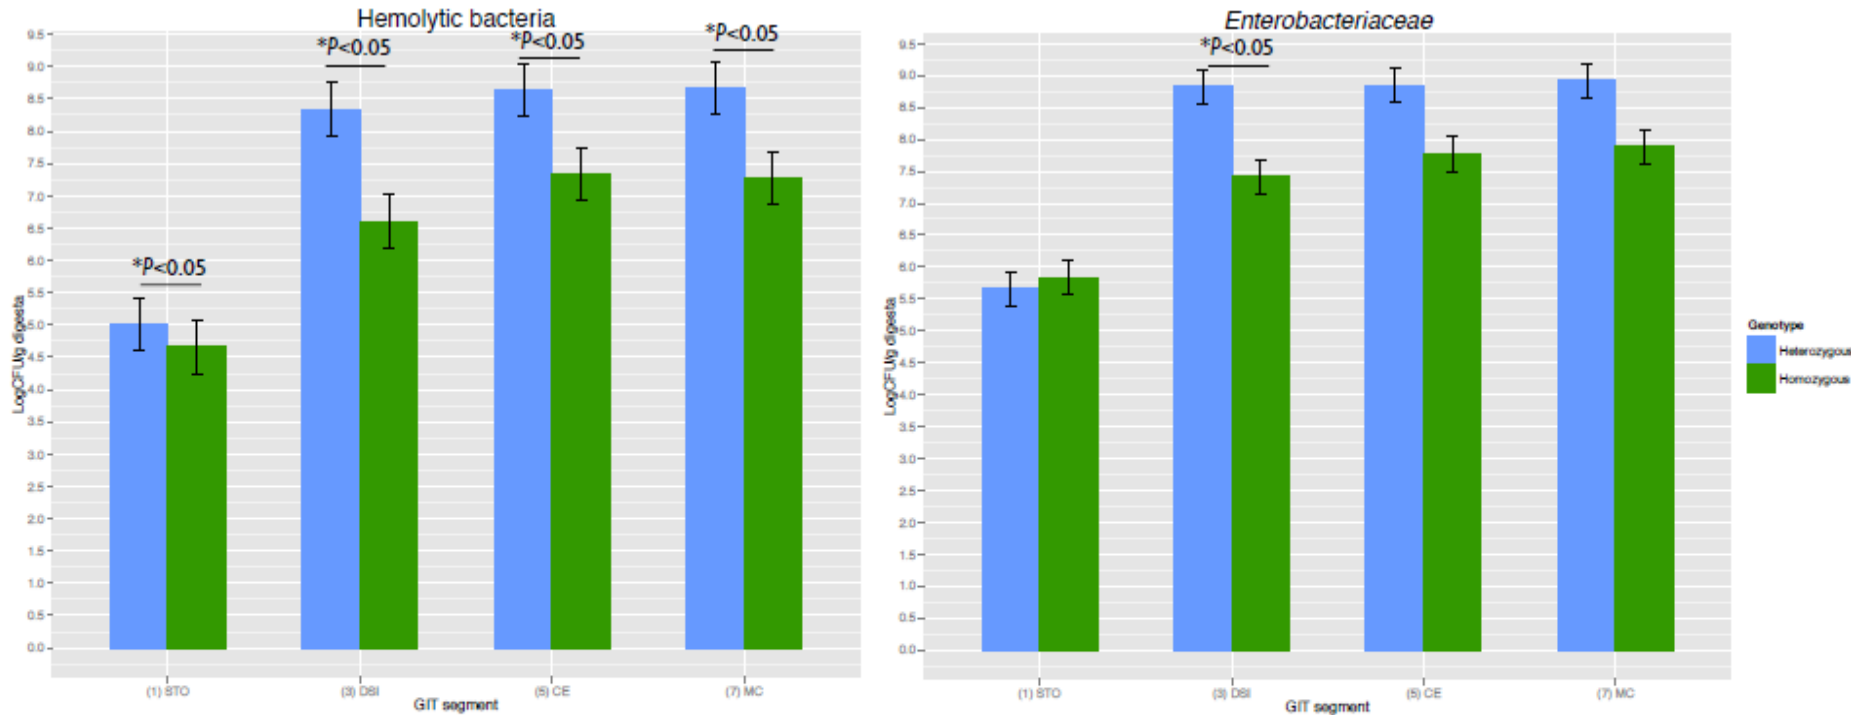

SHORT-CHAIN FATTY ACIDS* IN FAECES

| Day | SEN | RES | |
|-----|------|------|----|
| 5 | 61.7 | 55.4 | A |
| 7 | 56.0 | 49.7 | A |
| 14 | 49.4 | 43.0 | A |
| 21 | 54.3 | 48.0 | A |
| 28 | 63.8 | 57.4 | Ab |
| 35 | 87.1 | 80.7 | B |

*Sum of acetic, propionic, butyric acid (mmol/kg sample)

No effect of genotype

BACTERIAL ENUMERATIONS - DIGESTA

Blue=SEN
Green=RES

(1) STO = stomach
 (3) DSI = distal small intestine
 (5) CAE = caecum
 (7) MC = mid colon

ORGANIC ACID IN DIGESTA (NMOL/KG WET SAMPLE)

| | SEN | RES |
|-----------------------|-----------------|-------|
| Acetic acid | GEN*SEG: P=0.01 | |
| Stomach | 21.1 | 26.8 |
| Small intestine | 4.2 | 5.4 |
| Caecum | 47.6 | 39.0 |
| Mid colon | 54.5a | 39.4b |
| Propionic acid | GEN*SEG: P=0.01 | |
| Stomach | 8.1 | 11.7 |
| Small intestine | 2.3 | 13.2 |
| Mid colon | 1.9 | 11.9 |

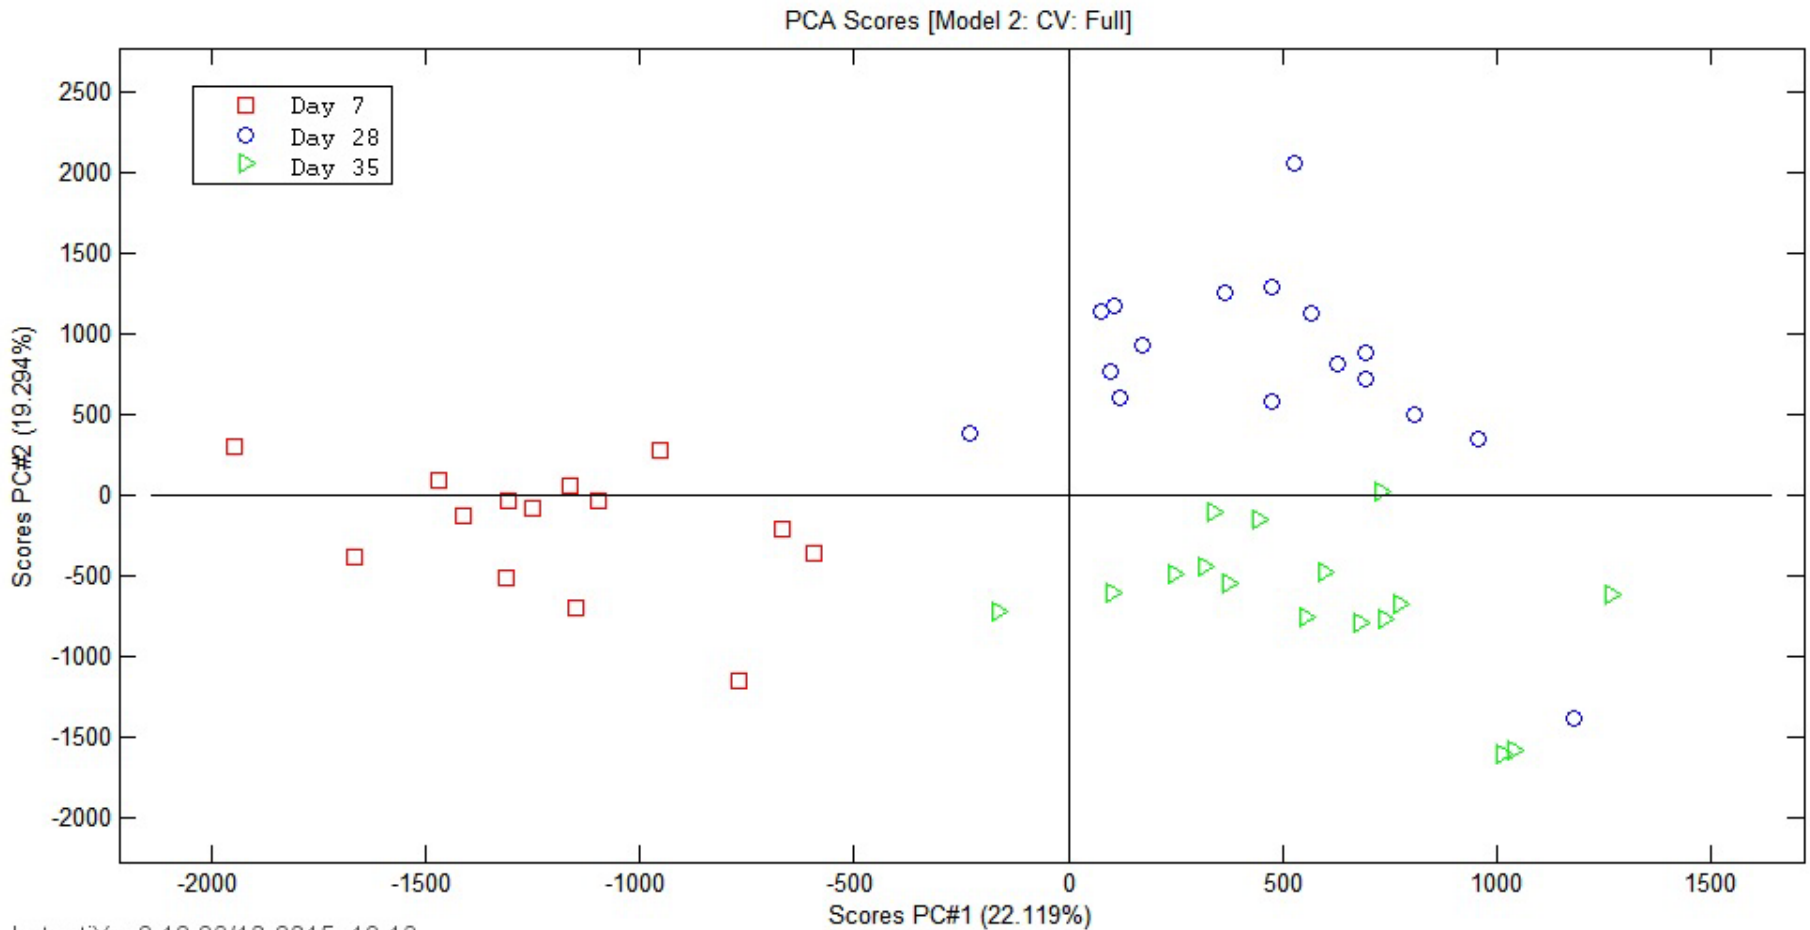

No influence of genotype on lactic acid and butyric acid

EFFECT OF FUT1 ON METABOLOME PROFILE

- › Non-targeted LC-MS
- › Total dataset: 16 animals for 3 times sampling
- › Day 7, Day 28, Day 35
- › Raw data: more than 1,000 compounds

- › Age rather than genotype influenced metabolomic profile of plasma

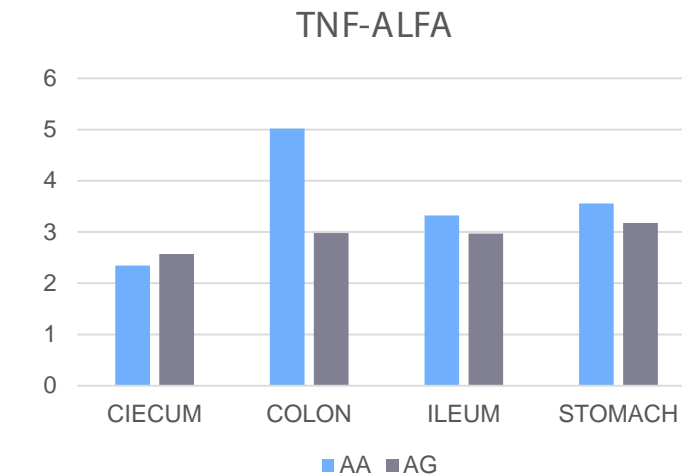

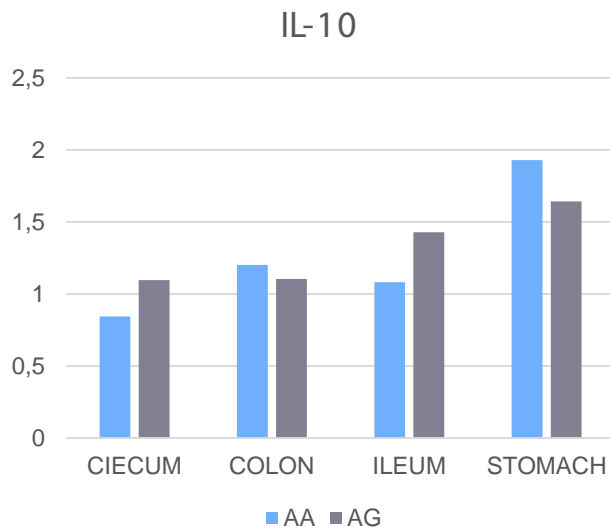

PCA PLOT OF TOTAL PLASMA SAMPLES

LatentIX v.2.12 26/10-2015 13:16

GENE EXPRESSION IN GI-TRACT

- › Tissues selected: cecum, colon, ileum, stomach
- › Expression of TNF- α , IL-10, COX-2, ZO-1, Occludin
- › Preliminary results showed little influence of genotype effect. Tendencies ($P < 0.1$) on IL-10 and TNF- α :

CONCLUSIONS

- › FUT1 genotype does seem to influence the colonisation of the GI tract
- › Same age-dependent GI microbiota development
- › Ex vivo model showed more binding of *E. coli* to intestinal epithelium in sensitive pigs.
- › Preliminary data showed that age rather than genotype affected metabolomic profile.
- › Difference in piglet weight (?) – limited number of piglets
